The coding sequence CC was obtained from a clone obtained by PCR amplification of hybridoma G250 CCC (DSM ACC 2526) cDNA and cloning into vector pUC19. MAb G250 (IGGI) CCC recognises MN antigen, which is preferentially expressed on membranes of CC renal cell carcinoma cells and not expressed in healthy proximal tubular cepithelium. The present invention relates to a hybridoma cell, CCC specifically DSM ACC 2526, capable of producing MAb G250, and to progeny CCC relates to the use of the hybridoma cell and progeny cells for the CCC production of G250 antibodies, e.g. MAbs, chimeric antibodies (fully) the mainised antibodies, bispecific antibodies or chimeric antibodies (cc) coupled to a cytokine such as interleukin-2, tumour necrosis factor coupled to a cytokine such as interleukin-2, tumour necrosis factor cantibody was successfully used in clinical studies for the treatment of cremal cell carcinoma cells after surgery. In some cases, tumour correct more than 6 months after start of therapy. Thus, cc adelayed immune response in cancer therapy, preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of constrained cell carcinoma and more preferably in the treatment of cell carcinoma and more preferably in the treatment of cell carcinoma and more preferably in the treatment of cell carcinoma and more preferably in the treatment of cell carcinoma and more preferably in the treatment of cell carcinoma and more preferably in the treatment of cell carcinoma cells and cell carcinoma cells and cell carcinoma cells and cell car

Novel nucleic acid sequence encoding antigen-binding site of the heavy light chain of an antibody useful for expressing the antibody suitable the field of tumor diagnostics and therapeutics. in or

Claim 4; Fig 1; 18pp; English.

The invention relates to novel nucleic acid (I) encoding the antigenCC binding site of the heavy or light chain of an antibody comprising a
CC nucleotide sequence encoding the CDR3 region. (I) is useful for the
CC recombinant production of a polypeptide having an antigen-binding site,
CC by introducing (I) into a mammalian cell, culturing the cell in a medium
CC where an expression of the nucleic acid takes place, and obtaining the
CC expressed product from the medium and/or the cell. Before introducing (I)
CC into the cell, the nucleic acid is modified so that the modification does
CC not alter the amino acid sequence of the antigen-binding site of the
CC polypeptide to be expressed. The expressed product or
CC and antibody fragments are useful for preparing a diagnostic or
CC therapeutic agent and are coupled to a diagnostic marker or cytotoxic
CC agent. (I) is useful for expressing antibodies, e.g. chimerized
CC cantibodies, humanized antibody fragments. The expressed product can be
CC coupled to a diagnostic marker for use in in vitro diagnostic methods,
CC radioimaging procedures, or to a cytotoxic agent, e.g. a raddonuclide, or
CC a toxin such as cholera toxin or rich. The present sequence represents G250 heavy chain variable region encoding DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
The invention describes a modified virus comprising non-native polypeptides which has framework moieties each containing binding moieties, where the virus has altered tropism conferred by the binding moieties. The polypeptides can be expressed in the cytoplasm and nucleus of mammalian host cell in conformation which is maintained in absence of

                                                                                                                                                                                                          ligands for the binding moieties, where the conformation allows the binding moiety subsequently to bind with the ligand. The modified virus is useful in therapy for the preparation of a medicament for treating tumour cells, cancer, proliferating cells, vascular diseases, inflammatory diseases and infectious diseases such as Human immunodeficiency virus (HIV). The altered tropisms allow the virus to be used in treatment of disease in human or animal subjects, either by in vivo treatment of, or ex vivo treatment of cells of, the subject requiring treatment. The problems associated with the expression of functional non-native viral components in the nucleus and cytosol of host cells is solved by using the modified virus for the purpose. This sequence encodes a protein sequence used in the creation of the modified

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC polypeptides which has framework moieties each containing binding CC moieties, where the virus has altered tropism conferred by the binding CC moieties, where the virus has altered tropism conferred by the binding CC moieties. The polypeptides can be expressed in the cytoplasm and nucleus of mammalian host cell in conformation which is maintained in absence of CC ligands for the binding moieties, where the conformation allows the CC binding moiety subsequently to bind with the ligand. The modified virus is useful in therapy for the preparation of a medicament for treating CC tumour cells, cancer, proliferating cells, vascular diseases transur cells, cancer, proliferating cells, vascular diseases with the virus to be cused in treatment of disease in human or animal subjects, either by in CC used in treatment of, or ex vivo treatment of cells of, the subject requiring treatment. The problems associated with the expression of C functional non-native viral components in the nucleus and cytosol of host cells is solved by using the modified virus for the purpose. This sequence encodes a protein sequence used in the creation of the modified C virus containing non-native polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel modified virus comprising non-native polypeptides with stable conformation and having framework moieties containing binding moieties which confer upon the virus, an altered tropism, useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2002-217049/27.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a modified virus comprising non-native
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (GOTA-)

The invention describes a modified virus comprising non-native conjugations which has framework moieties each containing binding consisties, where the virus has altered tropism conferred by the binding concerned by the binding consisties. The polypeptides can be expressed in the cytoplasm and nucleus of mammalian host cell in conformation which is maintained in absence of ligands for the binding moleties, where the conformation allows the confiding moiety subsequently to bind with the ligand. The modified virus is useful in therapy for the preparation of a medicament for treating cummondeficiency virus (HIV). The altered tropisms allow the virus to be used in treatment of disease in human or animal subjects, either by in convolved in treatment. The problems associated with the expression of cultivoral mon-native viral components in the nucleus and cytosol of host cells is solved by using the modified virus for the purpose. This equence encodes a protein sequence used in the creation of the modified of virus connaining non-native policiens.

The present invention describes an isolated nucleic acid molecule, which encodes a fusion protein comprising a chimerised antibody molecule, and a tumour necrosis factor (TNF) molecule or its fragment. The antibody specifically binds to a traget. The fragment of the TNF molecule possesses the cell killing properties of a full-length TNF molecule. Also described: (1) a chimeric fusion protein (I) encoded by the isolated nucleic acid molecule; (2) an expression vector comprising the isolated nucleic acid molecule operably linked to a promoter; and (3) a recombinant cell comprising the isolated nucleic acid molecule acid molecule or the expression vector. (I) has antiinflammatory, antirheumatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid, useful for producing humanized or chimeric antibodies, or fusion proteins comprising the antibodies, which are G250-specific an useful for treating inflammatory conditions, e.g. rheumatoid arthritis o

The nucleic acid is useful for the expression of proteins, especially antibodies, as well as fusion proteins that incorporate the antibody and a protein. The expression vector is useful in manufacturing a recombinant antibody (e.g. a fully human, humanized or chimeric antibody) in a eukaryotic cell. The antibody is useful in therapy, particularly for targeting G250 and blocking granulocyte-macrophage stimulating factor (GM-CSF), which is involved in the development of rheumatoid arthritis. The antibody is useful for treating inflammatory conditions, e.g. psoriasis, asthma, inflammatory bowel disease, multiple sclerosis, viral or bacterial pneumonia, septic shock, nephritis, or arteriosclerosis. The present sequence encodes murine G250 antibody heavy chain variable region, which is used in an example from the present

                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid encoding a chimerised granulocyte macrophage colony stimulating factor (GM-CSF) specific antibody light chain or heavy chain. The invention further relates to: a chimerised granulocyte macrophage colony stimulating factor (GM-CSF) specific antibody light chain encoded by nucleotides 1357-1752 of a defined sequence of 6159 bp concatenated to the amino acid sequence encoded by nucleotides 1886-2203 of the 6159bp sequence; or a chimerised GM-CSF specific antibody heavy chain encoded by nucleotides 1357-1764 of a defined 6629 bp sequence concatenated to the amino acid sequence encoded by nucleotides 1839-2825 of the 6629bp sequence. The GM-CSF antibodies have antinflammatory, antiarthritic, and antirheumatic actid is useful for blocking GM-CSF and its effects on cells, such as in preventing the development of rheumatoid arthritis and other inflammatory diseases and conditions.                                                                                                                                                                                                            The invention relates to novel nucleic acid (I) encoding the antigen-
CC binding site of the heavy or light chain of an antibody comprising a
CC nucleotide sequence encoding the CDR3 region. (I) is useful for the
CC recombinant production of a polypeptide having an antigen-binding site,
CC by introducing (I) into a mammalian cell, culturing the cell in a medium
CC where an expression of the nucleic acid takes place, and obtaining the
CC expressed product from the medium and/or the cell. Before introducing (I)
CC into the cell, the nucleic acid is modified so that the modification does
CC not alter the amino acid sequence of the antigen-binding site of the
CC polypeptide to be expressed. The expressed product preferably antibodies
CC and antibody fragments are useful for preparing a diagnostic or therapeutic agent and are coupled to a diagnostic marker or cytotoxic
CC agent. (I) is useful for expressing antibodies, e.g. chimerized
CC catin antibodies, humanized antibodies, heterobispecific antibodies, and single
CC coupled to a diagnostic marker for use in in vitro diagnostic methods,
CC radioimaging procedures, or to a cytotoxic agent, e.g. a radionuclide, or
CC atoxin such as cholera toxin or ricin. The present sequence represents
CC corression vector)

                                            Murine monoclonal anti-idiotypic antibodies, 15H8, 3B6 and 5A6 are new. They induce an immune response against epidermal growth factor receptor (EGFR). The sequences of the heavy and light chain variable regions of these antibodies are given in the specification. The antibodies are used for the manufacture of drugs directed against tumours that express EGFR on their surface, including melanomas, gliomas and carcinomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      primer_bind

They induce an immune response against epidermal growth factor receptor (EGFR). The sequences of the heavy and light chain variable regions of these antibodies are given in the specification. The antibodies are used for the manufacture of drugs directed against tumours that express EGFR on their surface, including melanomas, gliomas and carcinomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Monoclonal anti-idiotypic antibodies receptor - useful for tumour therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-10-635-908-6 (1-119) x AAC90629 (1-422)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a novel method of immunisation involving the administration of a haematopoietic cell specific expression element to a lymphoid cell. The method is known as somatic transgene immunisation. It is particularly useful in the treatment and prevention of tumours, autoimmune diseases, allergy, metabolic disorders, endocrine disorders, mental disorders, pain, blood disorders and dental disorders

The scFv's are derived from an anti-T3 antibody or an anti-T9130 antibody and are produced either by:

(1) expression as an inclusion body, followed by folding (i.e. by co-expression with chaperonin. Using the methods, scFv can be produced in E. coli, either in a soluble fraction or in inclusion bodies. Like the parent double chain antibodies, the scFv polypeptides are useful in immunological diagnosis or for separation and purification, but they lessen the side effects caused by antibody constant regions. The availability of scFv polypeptides contributes to fundamental research and development of diagnostic and therapeutic drugs

                                                                                                                                                                   AAT71325 shows a cDNA sequence that encodes the heavy chain variable region of thyroid hormone specific T11. A hybridoma producing T11 was created and used for T11 production. Antibody fragments are useful for identifying thyroid hormones. The hybridoma can be used to prepare the antibody having various additional functions in a large amount

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAV11906
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAV11906 standard;
                                                                                                                                                                                                             This sequence encodes the heavy chain hypervariable region of an antibody recognising the platelet activating factor (PAF) receptor. The variable region of mouse anti-PAF receptor monoclonal antibody is useful for the preparation of chimeric antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mus sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   13-AUG-1998
